TUTORIAL TO ACTIVATE THE DEMO VERSION OF A TESTING MASTER NODE

Note - This tutorial is for a beta trial version of Blockenomy only. The production version of the tutorial will contain changes appropriate for the commercialization of the project.

1. Open a browser on your phone or computer or tablet and select a page www.waves.exchange

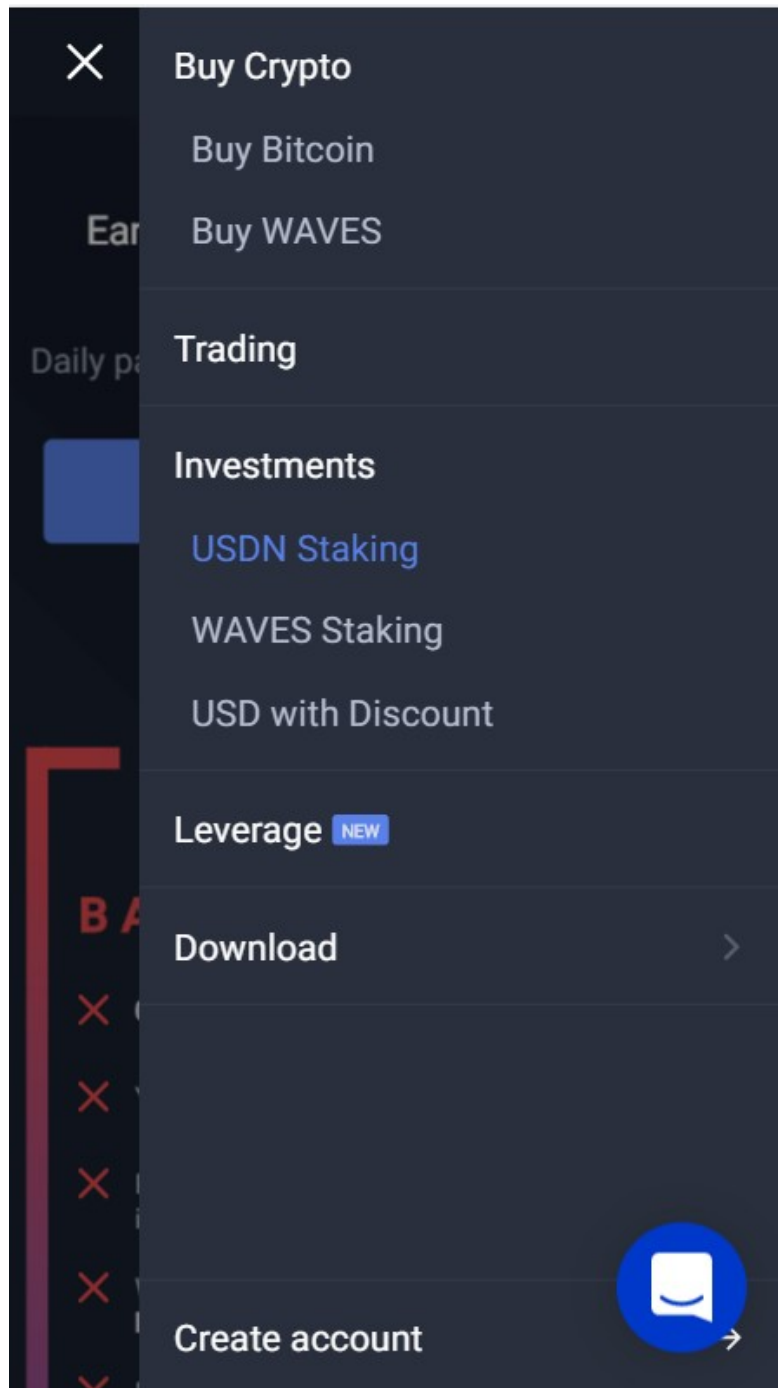

2. You will see the following view:

3. Click on the Menu symbol in the upper right corner (skip this action on the computer, because you do not need to select the Menu, you will see it always open):

4. You will open a menu view, in which click the bottom item "Create account"

5. Come up with your own personal password for your crypto wallet - enter it in both fields and select the consents, as on the screen below:

exchange

Continue

Select „Continue”

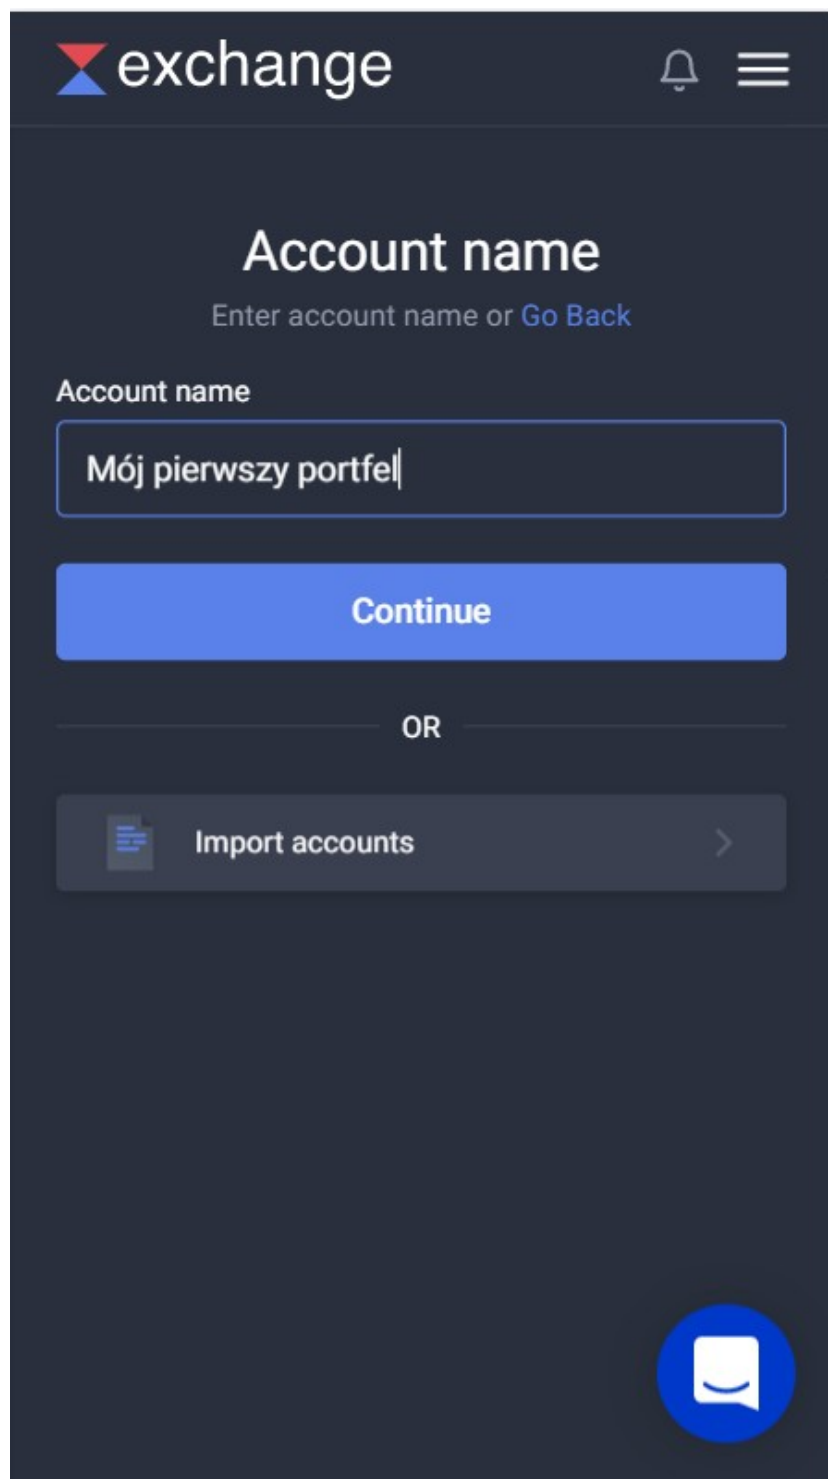

6. On the following screen, select "Create a new account":

7. On the screen below, select one of the avatars you like and press "Continue":

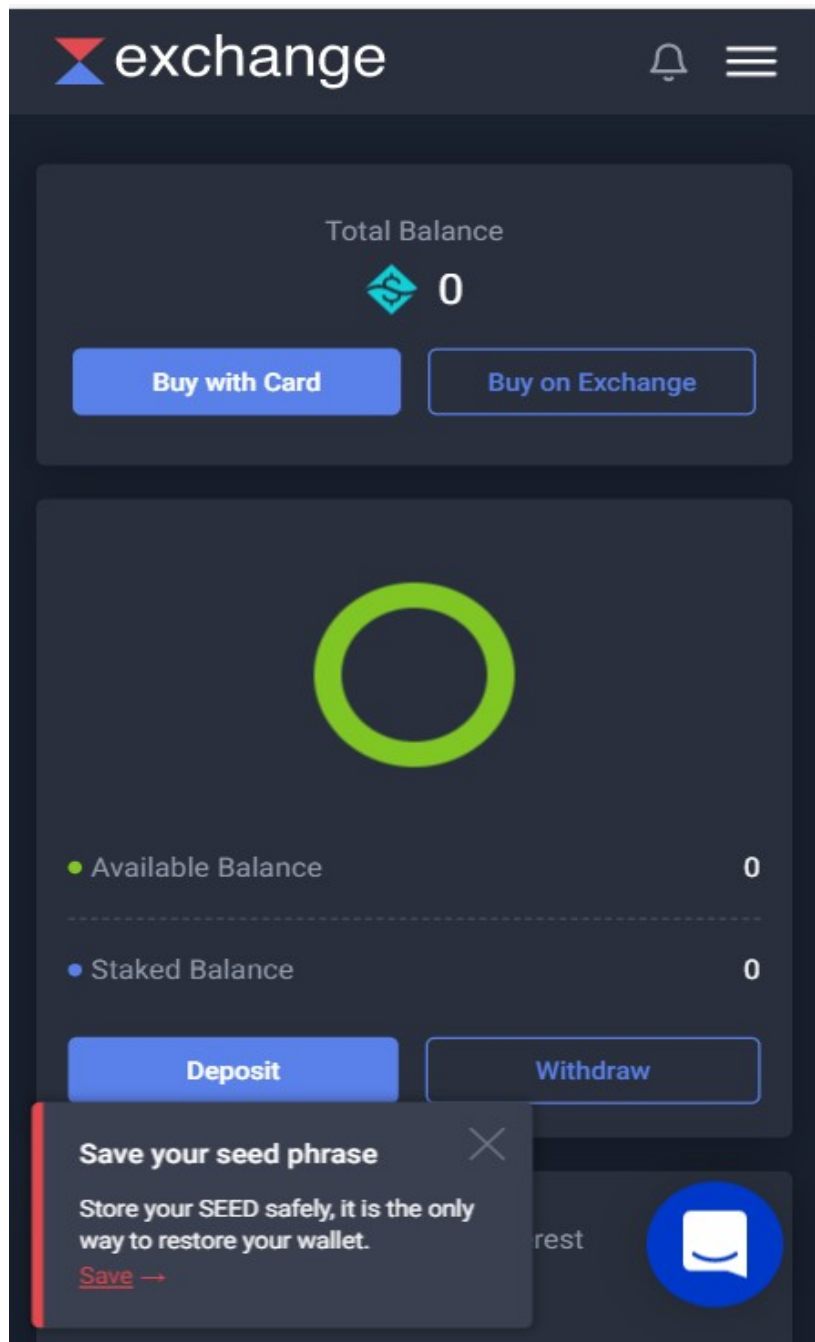

8. On the screen below, enter your own made-up name for your personal wallet and then press "Continue":

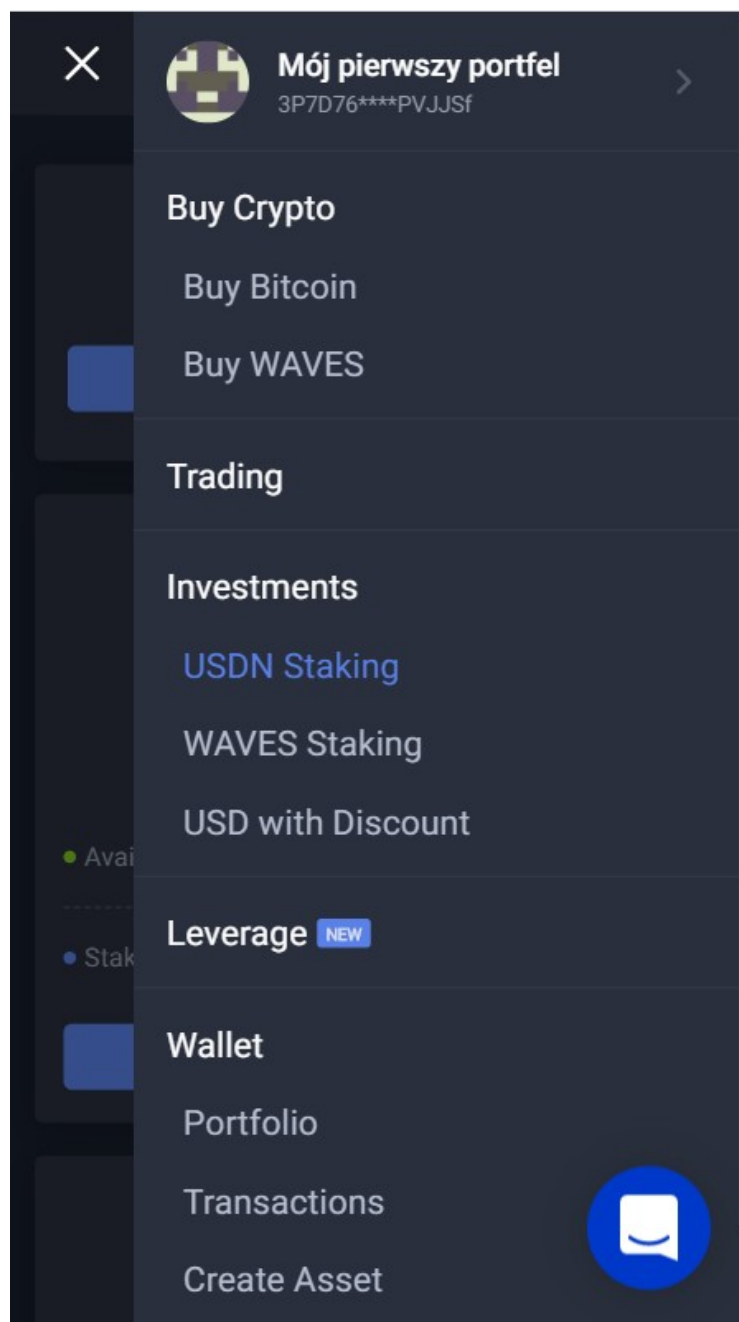

The screenshot shows a mobile application interface for creating an account. At the top left is the 'exchange' logo with a red and blue 'X' icon. To the right are a notification bell and a hamburger menu icon. The main heading is 'Account name' in a large white font, with the instruction 'Enter account name or [Go Back](#)' below it. A text input field contains the Polish text 'Mój pierwszy portfel'. Below the input field is a large blue 'Continue' button. In the center, the word 'OR' is displayed. Below that is a grey button labeled 'Import accounts' with a right-pointing arrow. At the bottom right corner, there is a blue circular icon containing a white speech bubble with a smiley face.

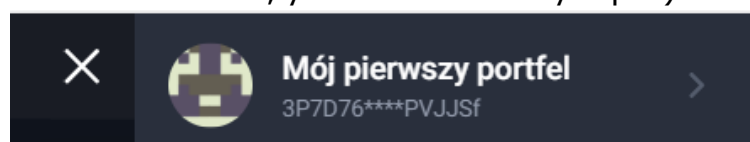

9. We will go to the one-time configuration of the three elements of your wallet. First, on the following screen, select Menu in the upper right corner (skip this step on the computer, because you do not need to select Menu, as you will always see it open):

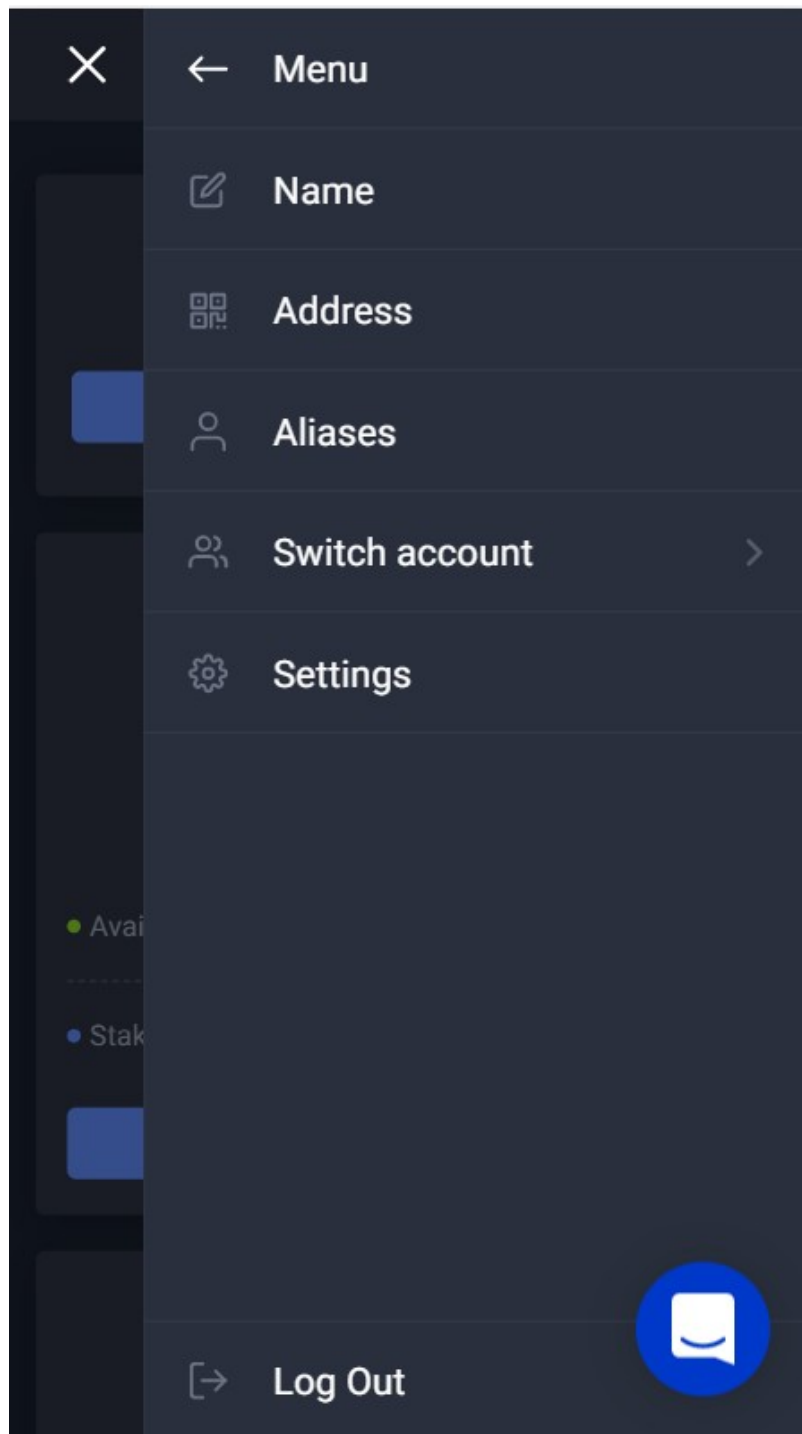

10. The Menu will open like on the following screen (skip this step on the computer, because you don't need to select Menu, you will see it always open):

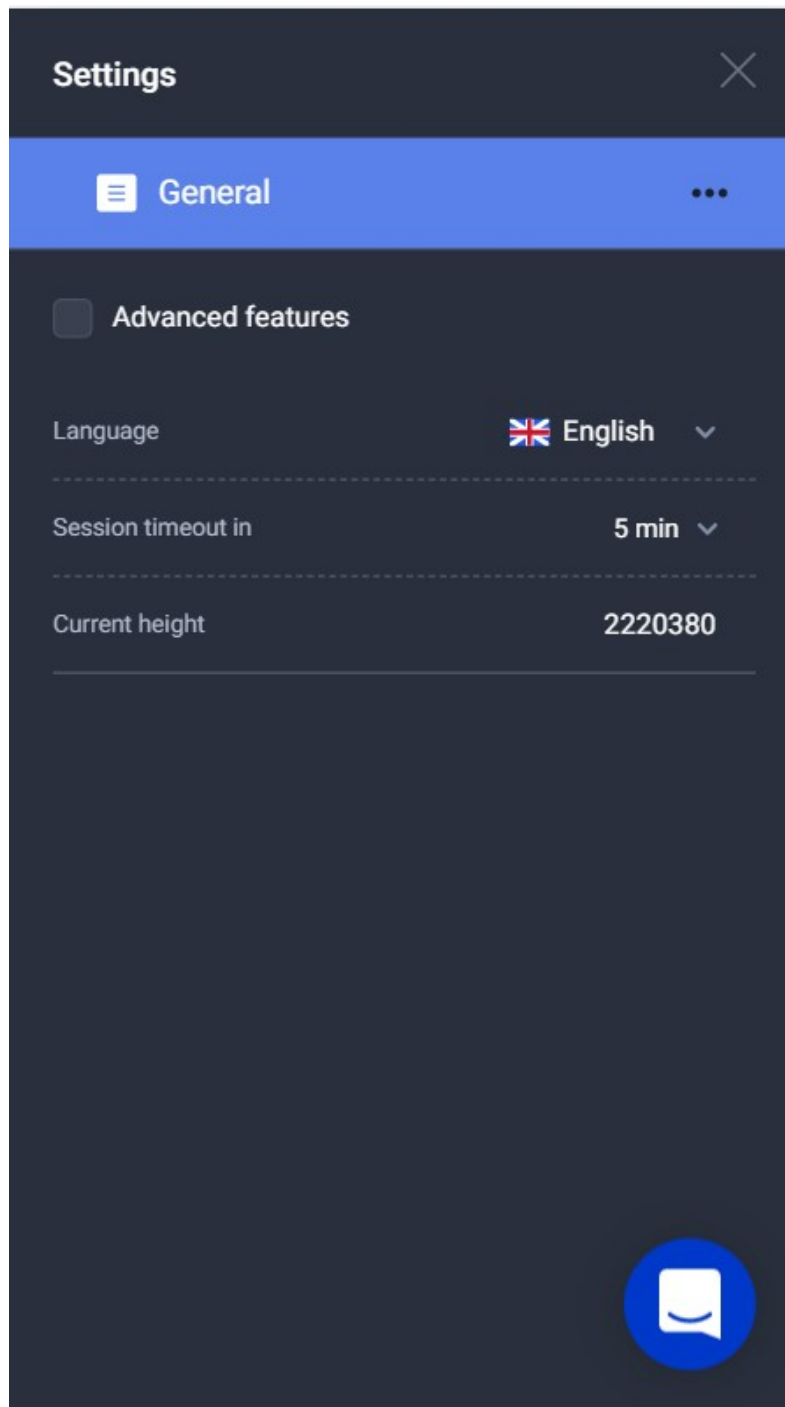

11. Select the arrow in the upper right corner (skip this step on the computer, because you do not need to select the Menu, you will see it always open):

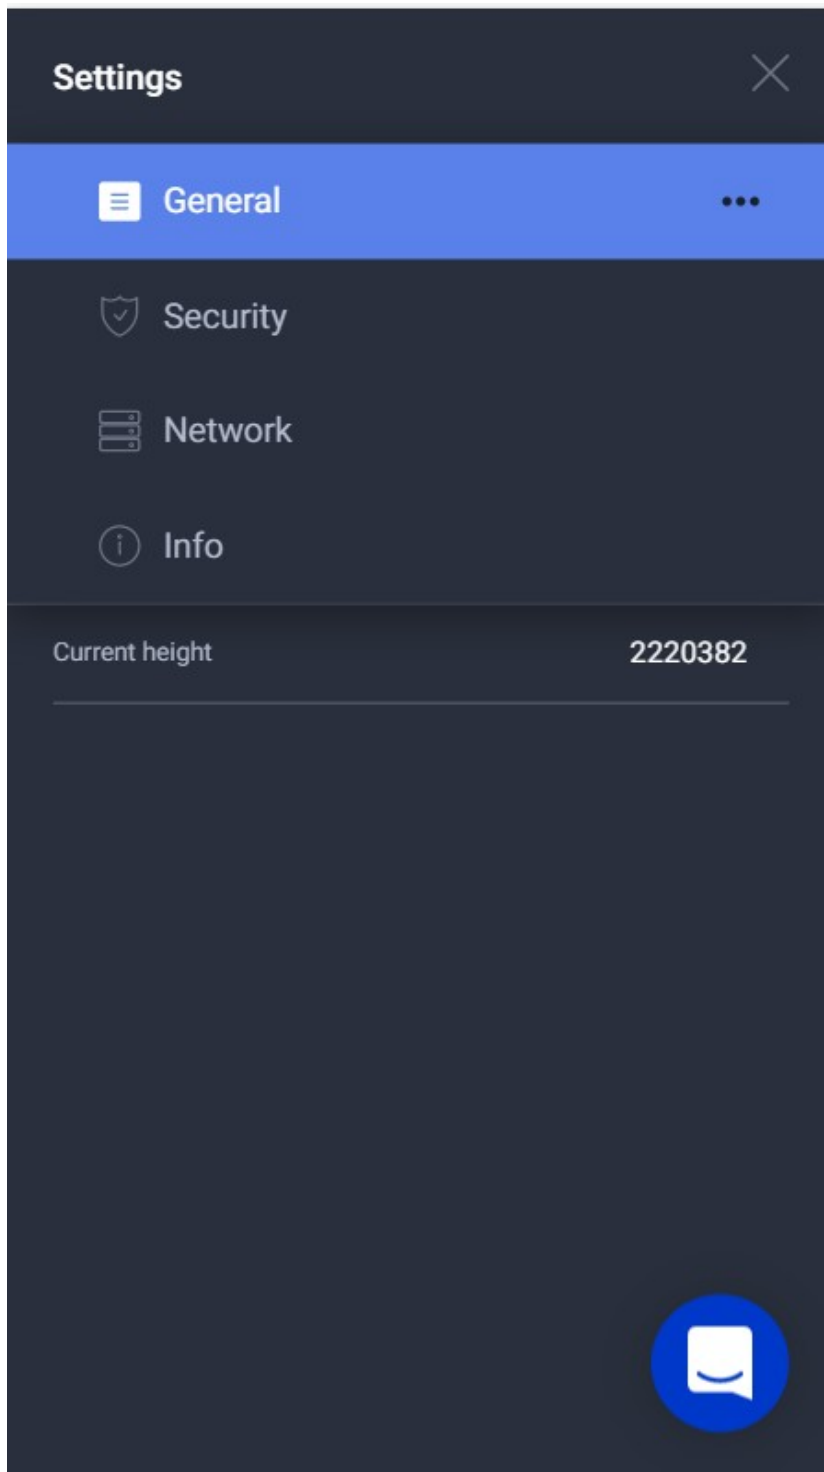

12. Click "Settings" on the screen below (you don't need to do this on your computer, you will see "Settings" in the top menu):

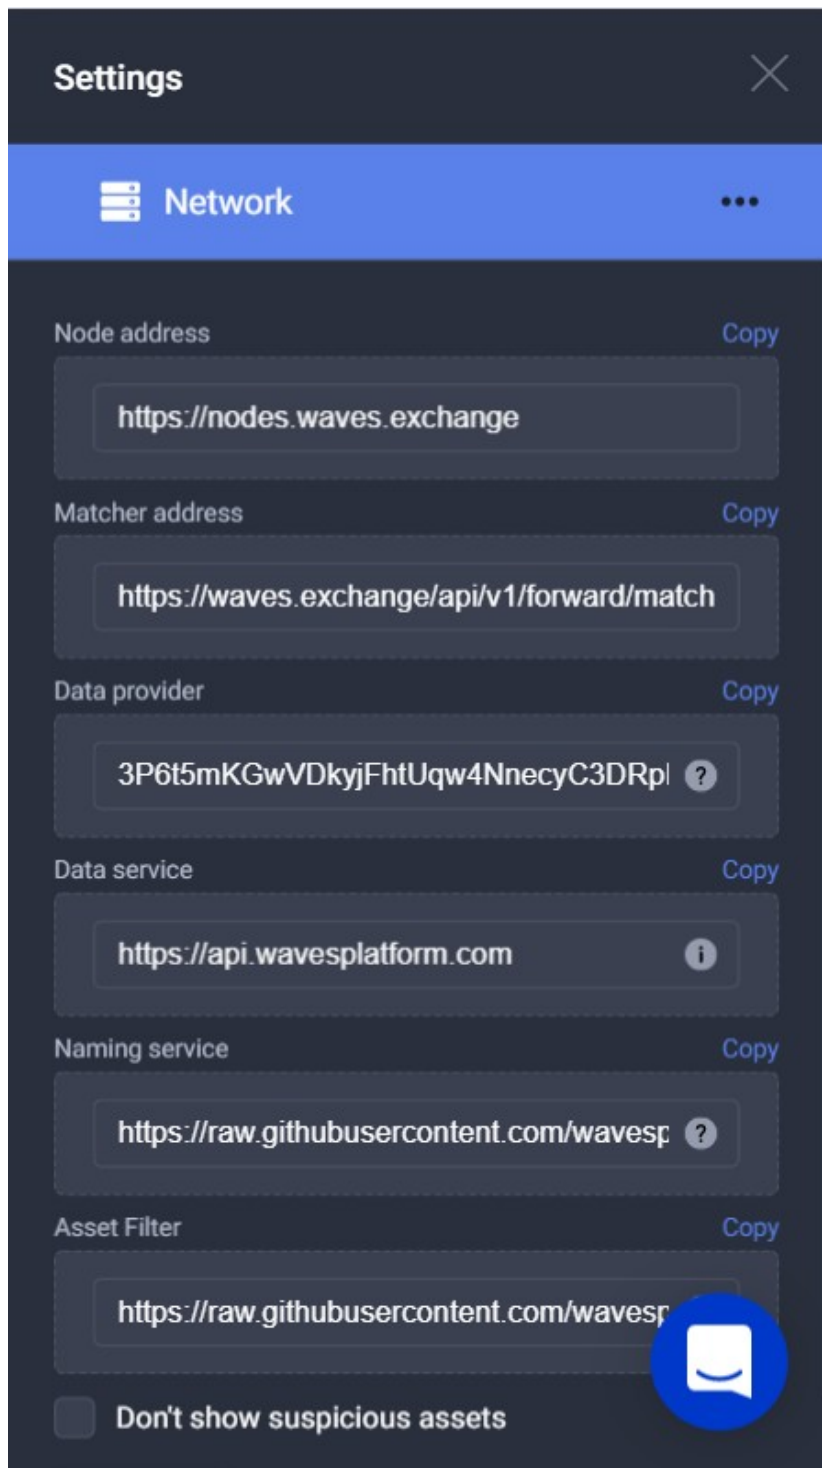

13. Select the three dots of the Menu expansion in the upper right part of the screen (on a computer you do not need to do this, you will have the entire "Settings" visible in the upper Menu at once):

14. You will get to the view below, in which select "Network":

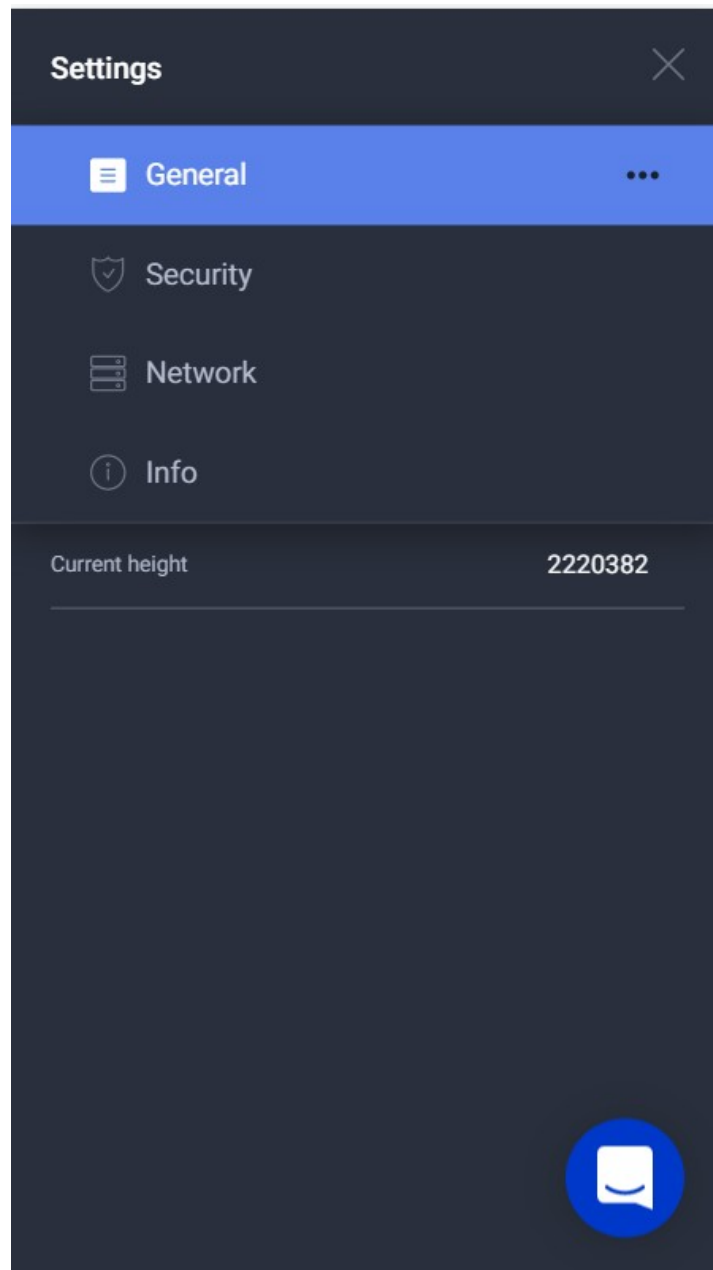

15. Deselect the last item at the bottom so it looks like the screen below. Note - this function is implemented due to the fact that during the test phase we have not yet paid the distribution fees in Waves (it is completely unnecessary for tests).

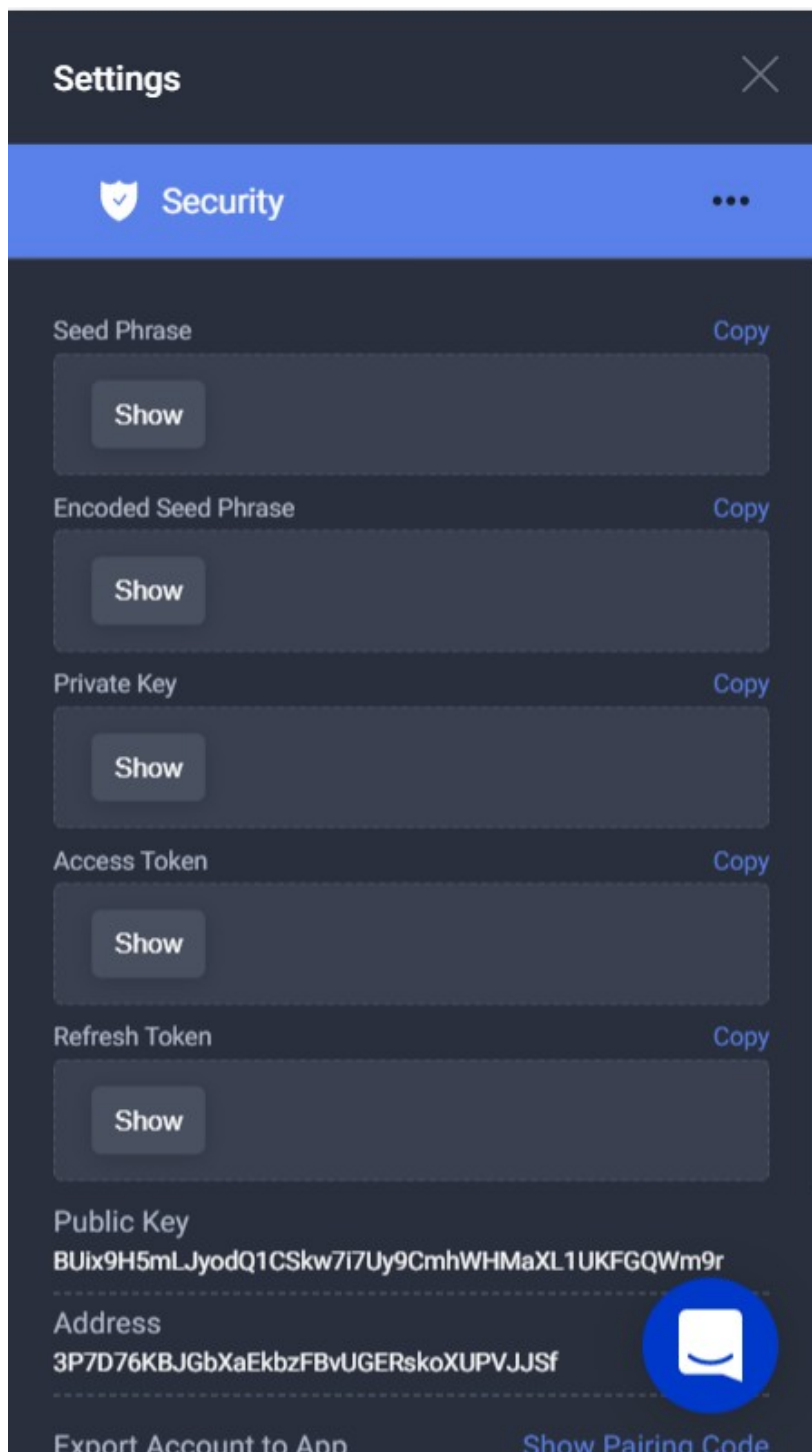

16. Select the three dots for the Menu expansion in the upper right part of the screen (on a computer you do not need to do this, you will have the entire "Settings" visible in the upper Menu at once):

17. You will get to the view as below, where select "Security":

18. In the view below - select the Copy button next to the "Seed Phrase" button:

19. You will be asked for your password, enter it:

Access Security Information ✕

Attention!
If you disclose this information to anyone, you will lose your funds.
To proceed, enter your Waves.Exchange password.

20. The system informs that the following data have been entered into the device's memory clipboard:

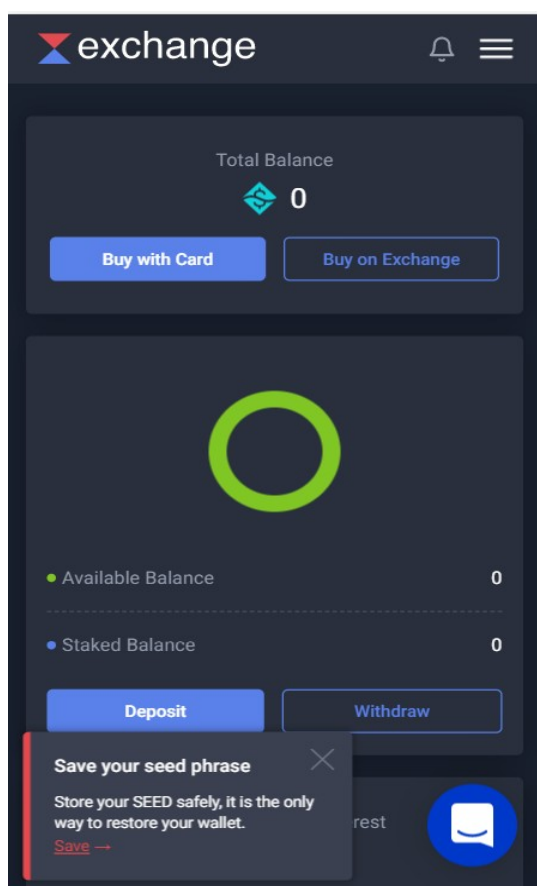

21. Turn off the Internet on the device. Then open any editor on your device and "paste" it. SEED PHRASE will be pasted from the memory clipboard on your computer, this is a rescue code into your wallet. **NEVER SHOW IT TO ANYONE, NOR SAVE IT ON DEVICES CONNECTED TO THE INTERNET.** Take a piece of paper and write down 15 words by hand in the order. CHECK if everything is correct. It will close the editor on the device without saving the content on the device. Only after it you can turn on the Internet on the device again.

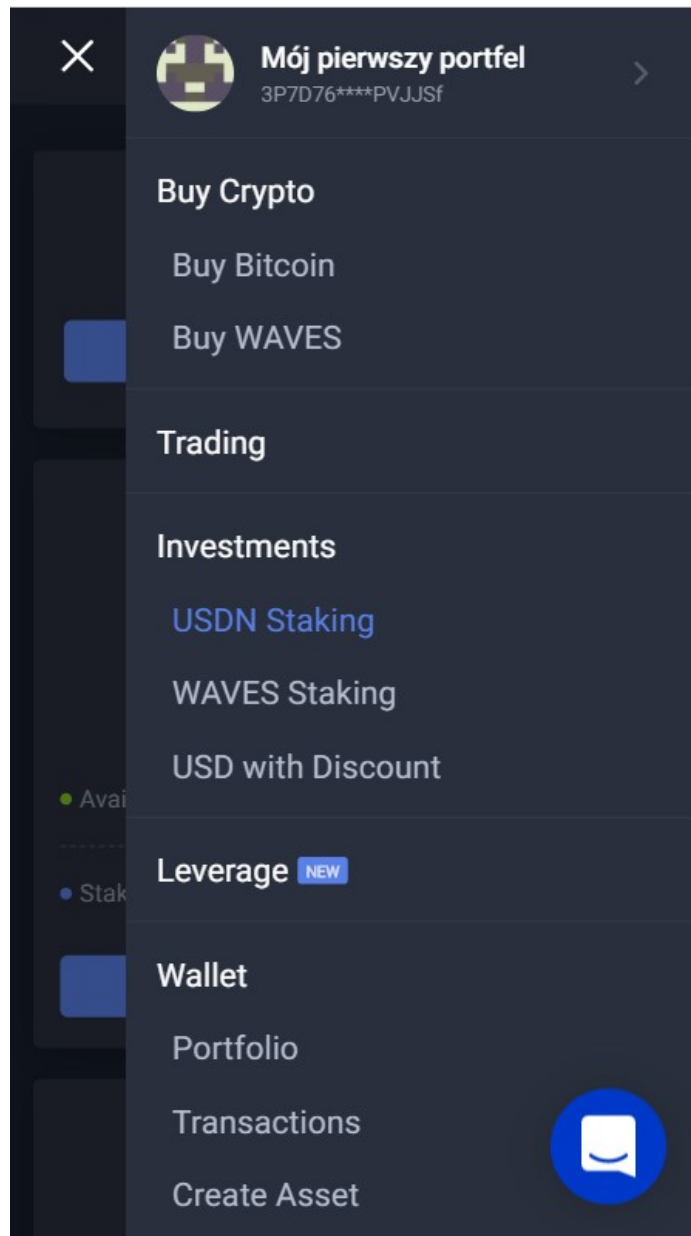

22. Close "Settings" by clicking the button in the top right corner:

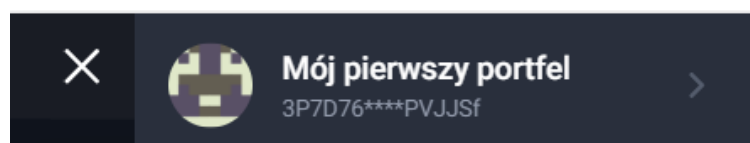

23. Select the Menu again in the upper right corner (skip this step on the computer, as you do not need to select the Menu, you will see it always open):

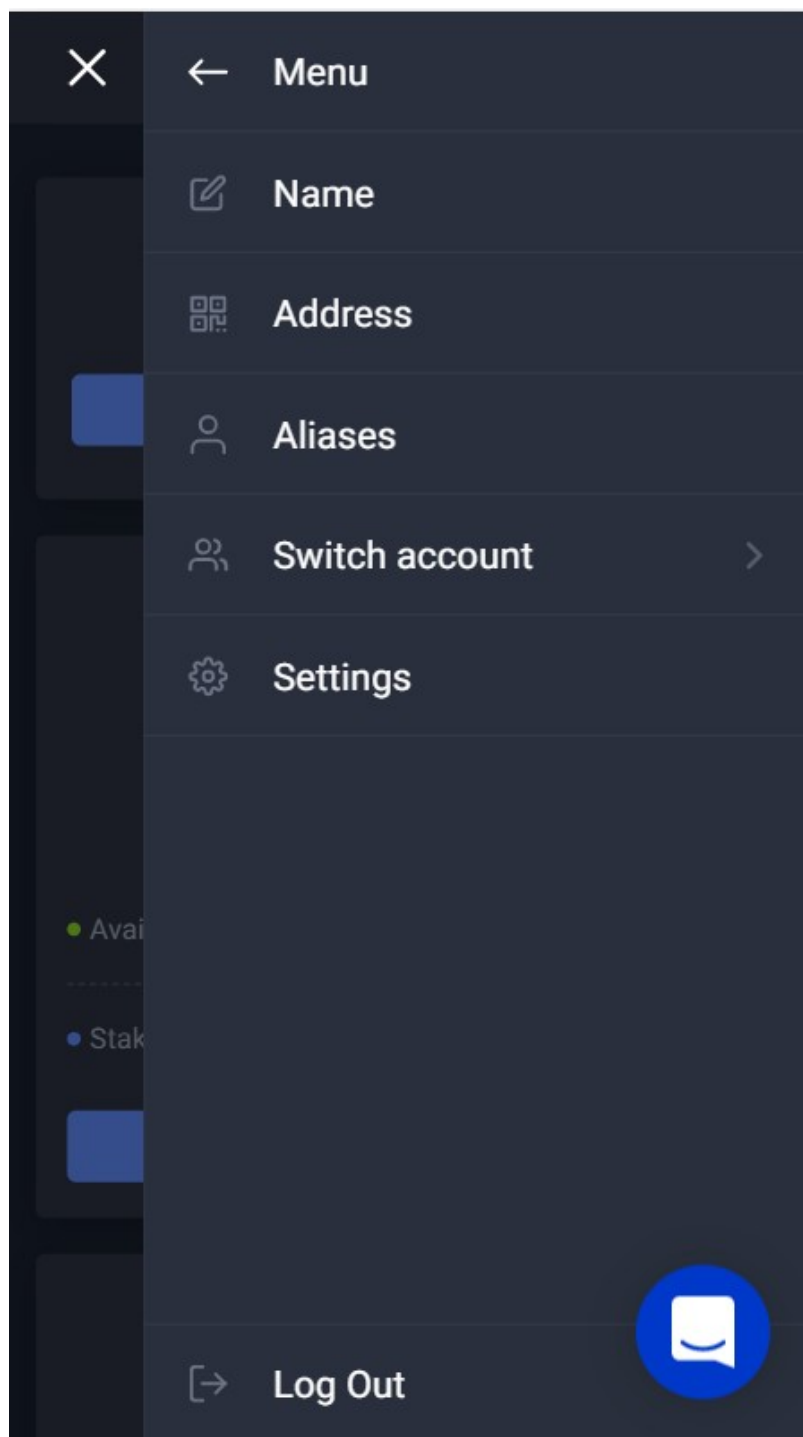

24. You will open the Menu as shown in the following screen (skip this step on the computer, as you do not need to select the Menu, you will see it always open):

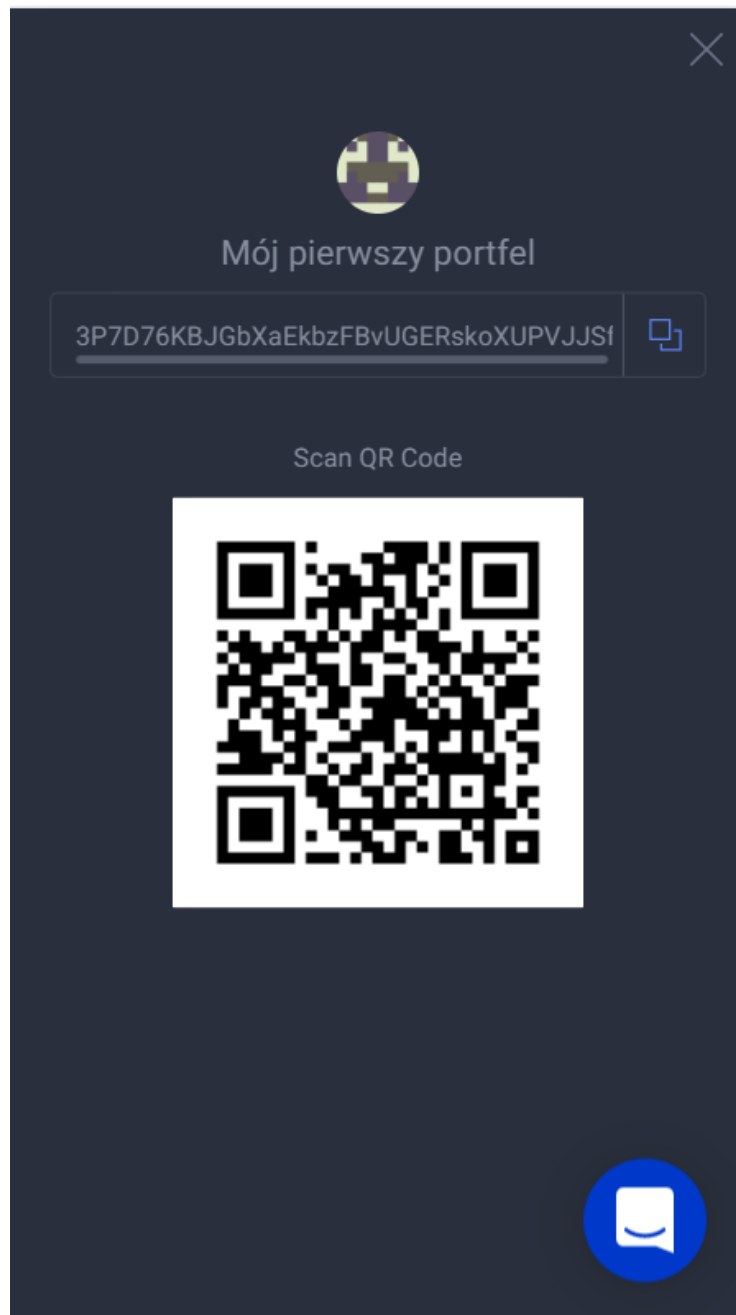

25. Select the arrow in the upper right corner (skip this step on the computer, as you do not need to select the Menu, you will see it always open):

26. Click on "Address" in the following screen (you do not need to do this on your computer as you will see "Address in the top Menu):

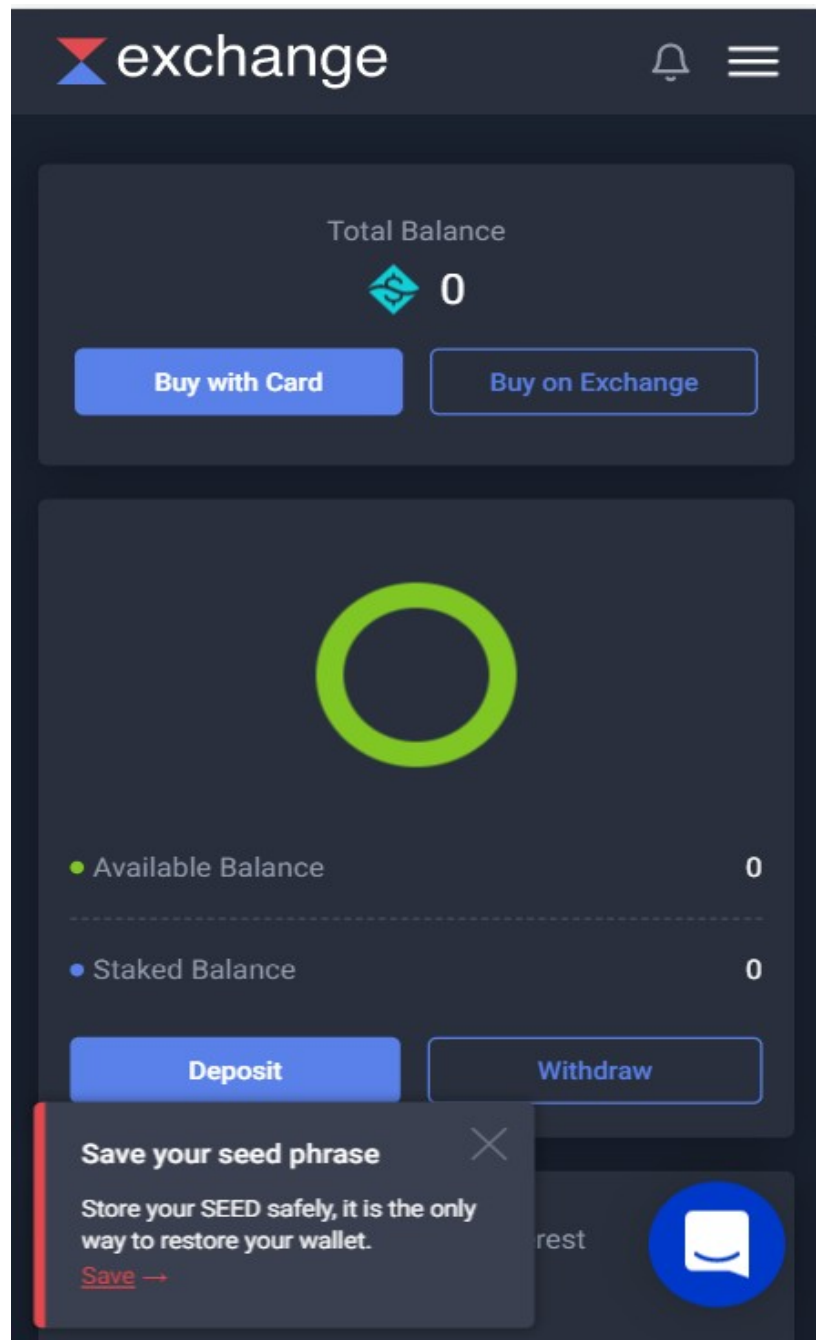

27. On the screen showing your address use the copy button, the displayed address will be stored in memory.

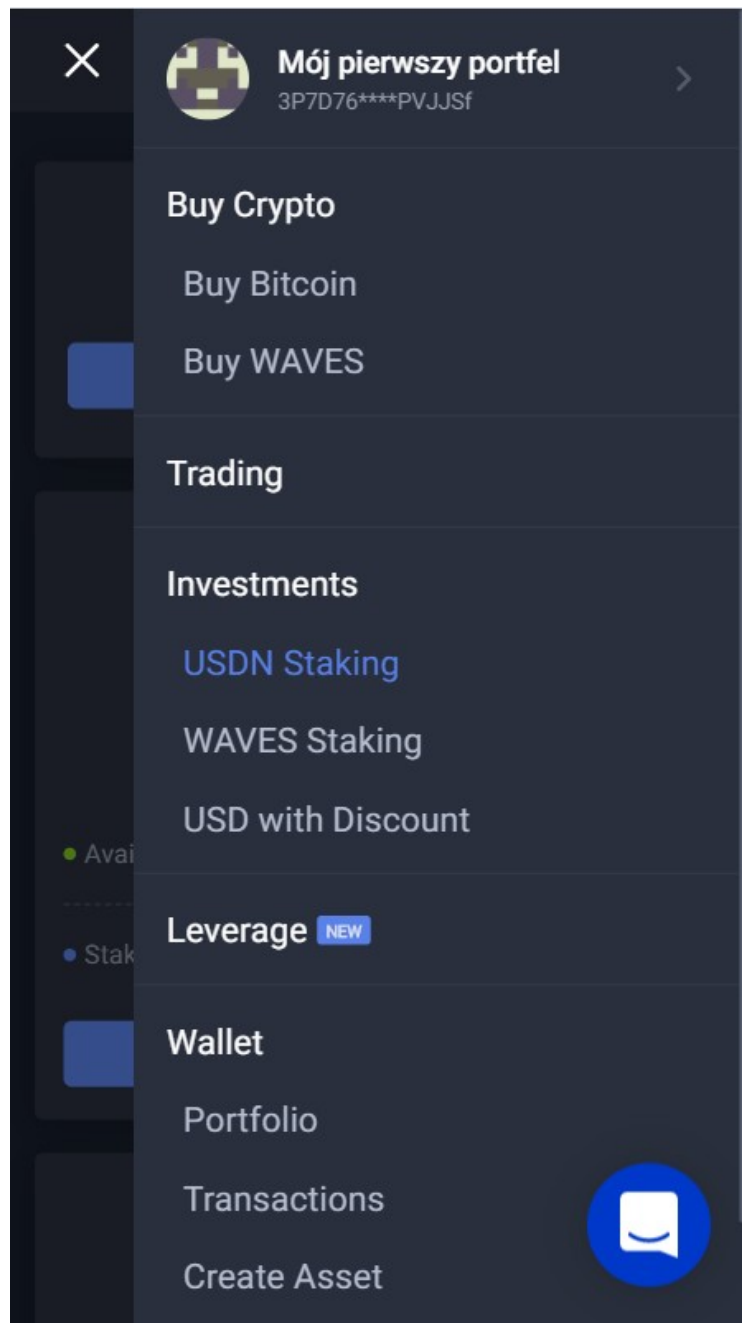

28. Paste the copied address into the e-mail and send the message to the Master Node Installer.

29. Now you have your wallet set up. Each time you log in, the wallet will ask for your password set at the beginning and will remember the settings made. REMEMBER - THE PASSWORD FOR THE WALLET IS NOT SEED PHRASE (WHICH IS, IN CASE OF WHAT IS THE ESCAPE KEY TO YOUR REMEDIES IN BLOCKCHAIN).

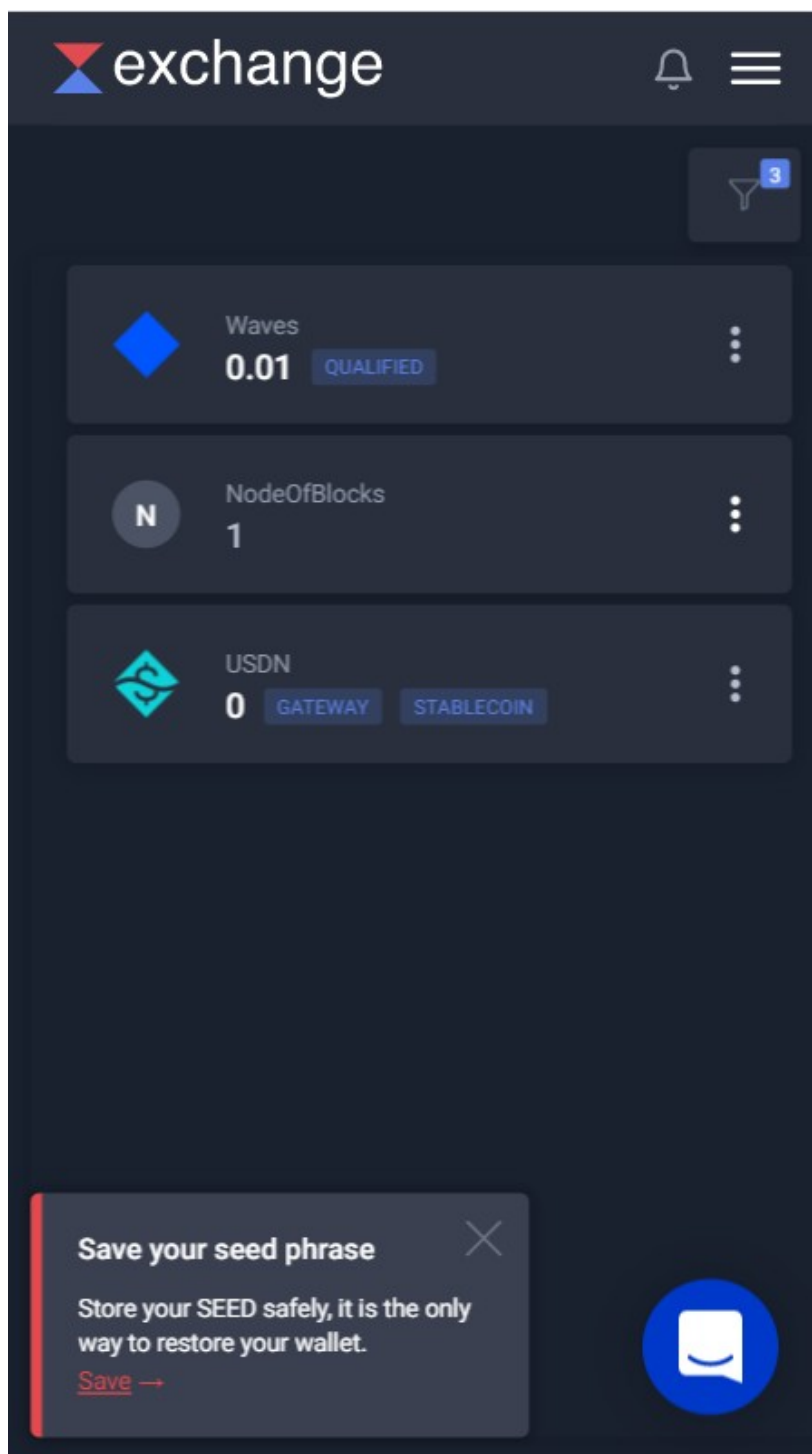

30. After some time, 1 piece of a special configuration coin will arrive at your wallet. How do I find out where I have all my cryptocurrencies? Select the Menu in the top right corner (skip this step on the computer, you do not need to select the Menu, you will always see it open):

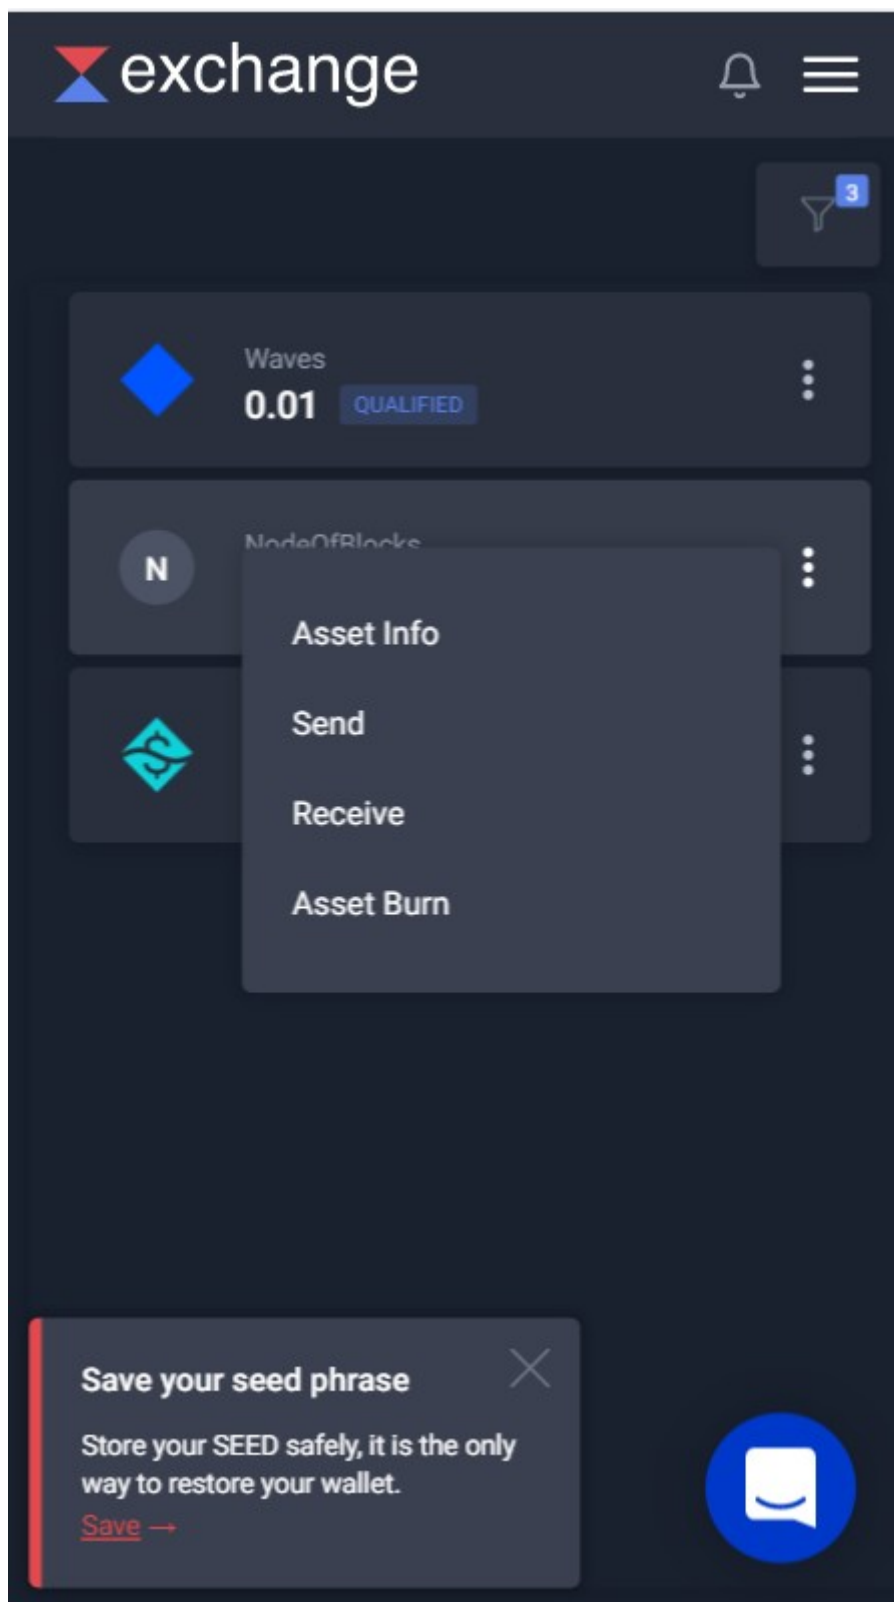

31. The Menu will open like on the following screen (skip this action on the computer, as you do not need to select the Menu, as you will always see it open), click on "Portfolio":

32. You will see your funds. On the list of funds you will have 0.01 Waves and 1 piece of a special configuration NodeOfBlocks token.

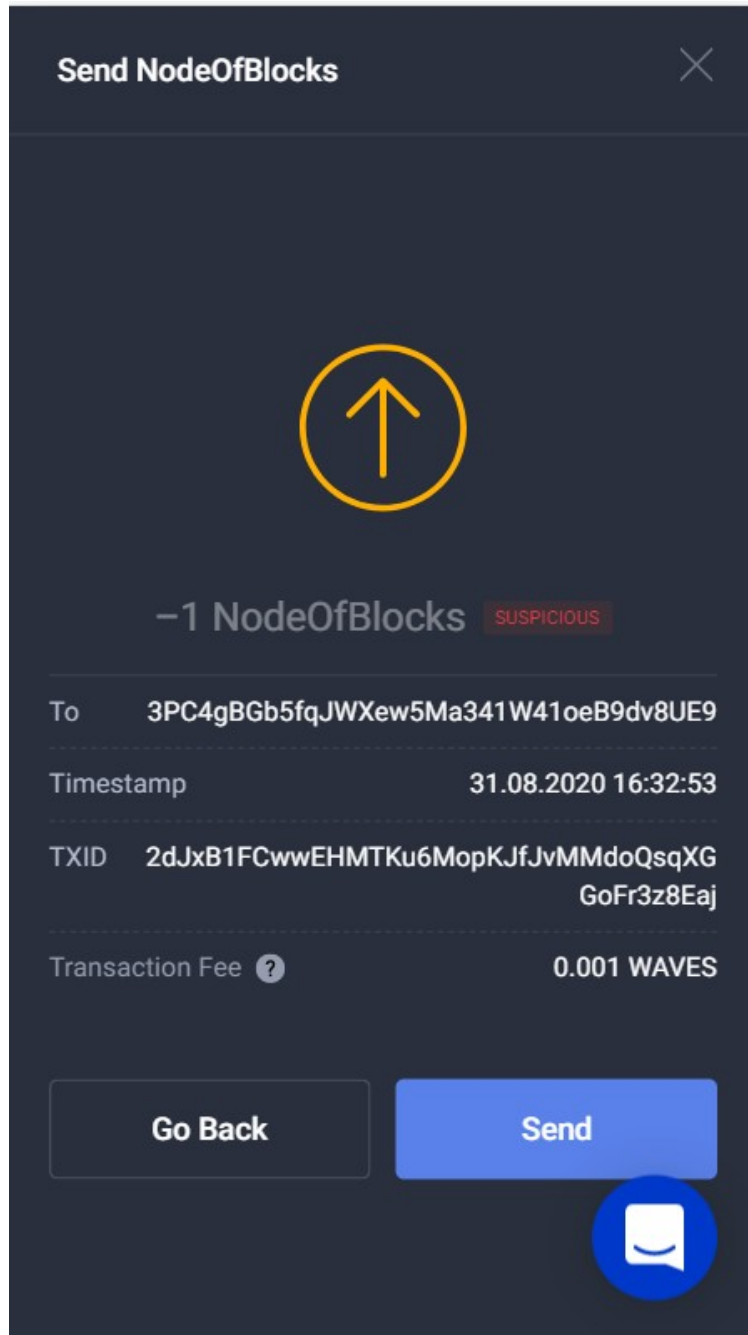

33. You need to send 1 NodeOfBlocks configuration token to activate your Master Node in the blockchain. Click on the three dots next to the NodeOfBlocks token as below:

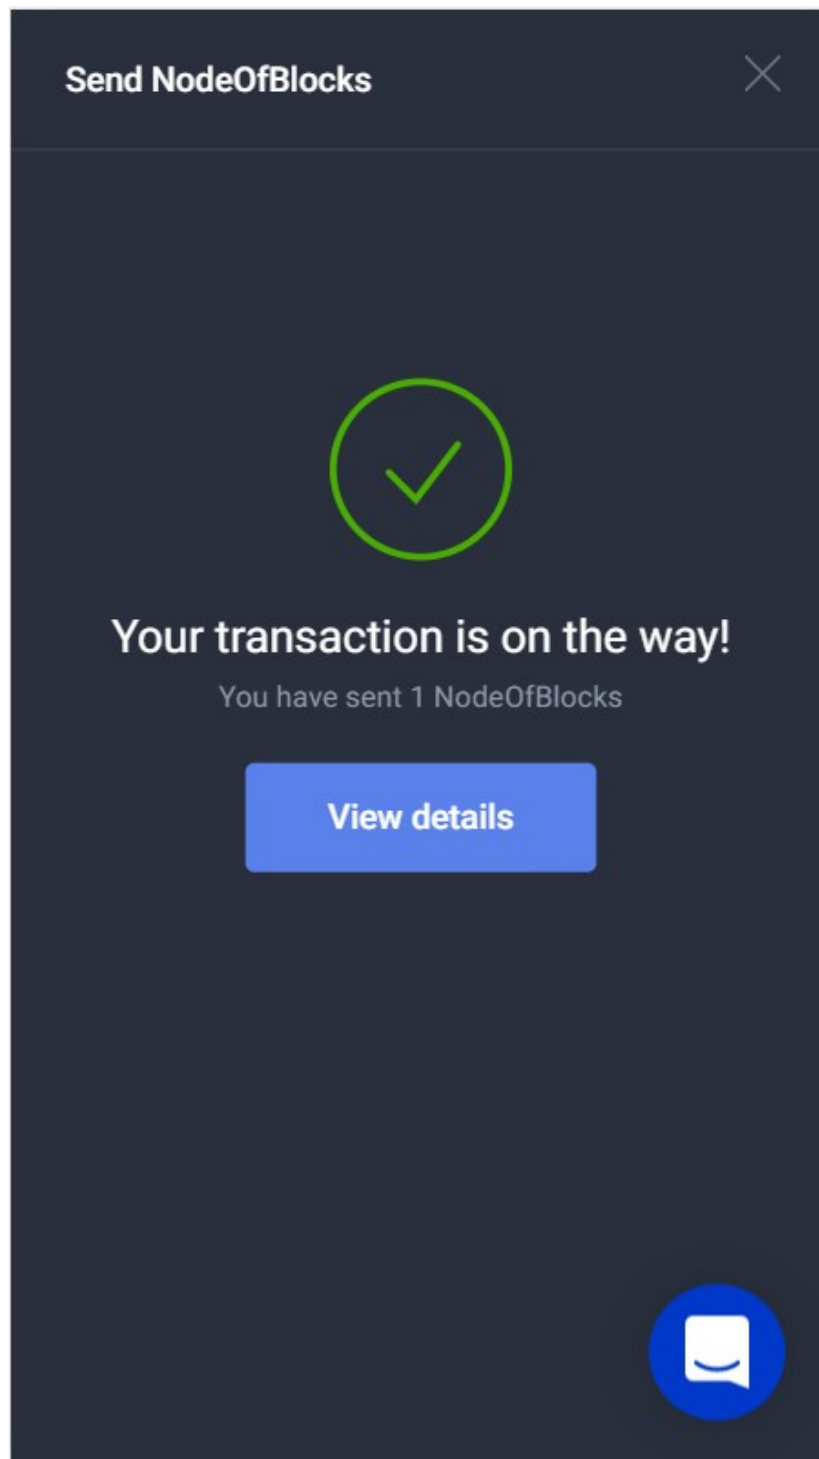

34. Click "Send" and on the next screen enter in the recipient field: 3PC4gBGb5fqJWXew5Ma341W41oeB9dv8UE9 (you do not need to rewrite manually, first paste the above address from this material to the clipboard, and then paste into the application as below). Enter 1 in the amount field and press "Continue":

35. You will see the message below. Click on "Send":

36. You will see the message below, your Master Node initialization in blockchain has been completed.

37. Close the window and from now on you can use the wallet whenever and however you want.

Blockchain will soon save your address in Master Node as the recipient of Master Node mining. You will then see that the Coins Blocks mined in the mining will start flowing into your account regularly. The installer will tell you separately how you can view the Master Node's activities on Microsoft Windows Server 2019 from your personal computer.
