digicapital flows*

*the future, an alternative to the current capital markets*

## **FEATURES OF THE INNOVATIVE BLOCKCHAIN AND THE RULES OF MASTER NODE DISTRIBUTION**

**Production version v. 1.0 from 4th Oct 2020.** On its basis, the process of preparing contract templates for Blockenomy system participants is currently underway. Planned commercial launch of the system between October 20, 2020 and January 10, 2021.

Blockenomy responds to the specifically diagnosed needs of the capital market. The ecosystem enables the multiplication of digital capital for Blockenomy system participants and supporting the development of new digital assets, indirectly; for selected projects. First of all, projects of such digital assets must be adapted to the market and be developed in accordance with the constant recommendations of the Lean Startup methodology. The main area of Blockenomy's activity is building a digital economy based on the so-called stablecoins.

The project is a response to market needs:

It generates the first unique Blockenomy cryptocurrency on the market, which, in addition to the possibility of mining it, also acts as yieldcoin and stablecoin. Its function is to secure the right to a guaranteed settlement, the so-called staking in the amount of 11-14% per annum in relation to USD (in the near future, the user may choose another fiat currency, such as EUR, JPY or CNY), with full convertibility into USD (or an appropriately selected other currency) in the ratio of 1: 1. The surplus of digital capital from tokenization launched in the Blockenomy ecosystem will be added to the base of staking. ***It is important that the Blockenomy project will not violate the deposit law or EU law regarding the need to have a license to issue the so-called electronic money ("e-money institution"), which, however, is a risk in the case of many projects used on the European market. Blockenomy bypasses this regulatory risk.***

From the legal point of view - the ecosystem as a business is built entirely within the digital asset capital flow model (i.e. it resides outside the regulatory area of the financial market in accordance with the regulations of both Poland and the EU).

Technologically the ecosystem consists of two basic elements:

\* The term and definition of blockenomy (blokenomy) were invented and developed by Mariusz Sparczyński. Together with the graphic symbol, they were notarized on July 15, 2020. The term, definition and graphic symbol constitute proprietary copyrights © Mariusz Sparczyński, 2020

1. A cryptocurrency system - currently as an intrachain in Waves with a Blockenomy token. Plans for several years ahead assume that it will be transformed into its own blockchain with the Blockenomy cryptocurrency. Blockenomy was known in earlier laboratory works on the market as biSEC-BlockCore - defined after the Let's Fintech PKO BP program as one of the 100 most important projects changing Polish banking.
2. (Plans to be launched later in the project development) Tokenization system for obtaining new digital assets.

Ad 1.

Being an integral part of Blockenomy - the **Blockenomy token (in the future cryptocurrency) has a motivational significance**. This ensures full compliance with the regulations on investing in cryptocurrencies and mining. Therefore, it is not an investment within the meaning of the MIFID regulations regarding financial instruments, or various interpretations regarding utility tokens or security tokens. So it is neither an ICO nor an STO, but simply the mining of a digital asset Blockenomy cryptocurrency, similar to mining Ethereum or Bitcoin. After transforming into its own blockchain with the Blockenomy cryptocurrency - it will be able to maintain the balances and exchange (the **so-called DEX decentralized cryptocurrency exchange**) of various other cryptocurrencies, apart from Blockenomy, e.g. tokens implemented within the ecosystem, or Bitcoin, Ether and various types of tokens popular on the market, thanks to the so-called gateways.

Ad. 2

(To be launched later in the project development). Capital processes in Blockenomy are based on **tokenization (including cryptofunding)** of projects in ERC20 format on a separate, independent and public Ethereum blockchain. They will be implemented by an additional subsystem (application, records, verification and financing) that records the history of the business project development in tokens on the Ethereum network for each of these projects. These tokens will then be exchanged, transferred and sold on the Blockenomy network. Similar like in the TecraCoin project - financed projects are based on selected innovations, including inventions and patents.

From the technical side:

- (1) as of the date of this document, Blockenomy is a type of intrachain in Waves;
- (2) in the future it will be converted into a separate blockchain and Blockenomy tokens will be converted to Blockenomy cryptocurrency in a 1-to-1 ratio;
- (3) staking, which is used by the Blockenomy system, is carried out on the basis of reputable and safe products, in the first stage of project development these are stablecoins implemented (e.g. together with the Frick Bank from Liechtenstein and the decentralized USDN), and tokenization will be performed in the future in the network Ethereum.

Basic parameters of Blockenomy token mining distributing staking from surplus of the digital capital operating in the Blockenomy ecosystem:

The value resulting from the staking + distribution of the surplus of digital capital in digital assets is divided. Only each master node is entitled to split. Each of them will receive 90% of 12-15% annually (i.e. in real terms from 11% to 14%) of the digital capital invested with this master node, through mining, once a day, as emission Blockenomy digital assets, which is disposed of in accordance with the allocation:

- 90% for Master Nodes for the implementation of the above-mentioned mining + staking

- 5% transferred to the company that organizes work on the Blockenomy ecosystem, in which the creators of Blockenomy are located, which will allow the company to face ongoing operating costs;
- 5% is allocated to the community around the project, including primarily the technical development of the project in the coming years.

#### Market price:

- Blockenomy provides the irrevocable right to a smooth exchange back to market-and-widely-recognized stablecoins at the price of 1 Blockenomy = USD 1 in conversion, after using this exchange and the so-called "Burning" of the Blockenomy token used;
- in addition, Blockenomy is traded on the free market at prices based on supply and demand.

#### Business foundations for ecosystem growth and benefits from staking + mining:

From the funds of digital capital inserted into the Blockenomy system along with the launch of the master node (direct contracts) - the above-mentioned company will implement a policy of stable growth based on the activities indicated in these concluded direct contracts, subject to recording, auditing and tax documents preparation (in accordance with the jurisdiction taxation of the master node owner).

#### Plans:

- within a year from running own blockchain - the Blockenomy cryptocurrency will start to be listed not only on the decentralized crypto exchange that is part of Blockenomy, but also on several world crypto exchanges.
- project partners (investing in master nodes) can achieve a spectacular and stable return on investment in mining / staking by supporting the Blockenomy ecosystem.

#### Risk:

- the economy based on digital assets, using records in a distributed blockchain chain, using cryptocurrencies for capital flows - is still an innovative economic phenomenon, exposed to considerable organizational, legal and economic risk;
- the above-mentioned risk is mitigated by the huge experience of the project founders in the cryptocurrency / blockchain industry.

#### Initial offer for software and installation of Master Nodes:

- one free Master Node license providing mining Blockenoma is granted for every USD 10 500 installed in the form of digital capital in the Blockenomy system, as a result of the above-mentioned direct contracts;
- the installation and maintenance of Master Node for its owner is carried out free of charge by the above-mentioned company in the Google Cloud infrastructure or equivalent;
- the license owner can freely sell it, transfer it, etc., and the above-mentioned company is obliged to implement and maintain Master Node in Google Cloud as above, for the new license owner;

- license distribution is permanent throughout the project, economically speaking, with the increase in license sales, higher efficiency than the basic 11-14% per year should be achieved, due to the fact that there will be more capital working for staking in the Blockenoma ecosystem , and each linear increase in the number of licenses corresponds to an identical linear increase in the amount of this capital in the ecosystem, which does not disturb the proportion of the amount of capital working per license.

Based on this material, the process of preparing contract templates for Blockenomy system participants is currently underway. Planned commercial launch of the system between October 20, 2020 and January 10, 2021.
